SPALINK APP

The Ultimate in remote spa control

The SV SmartLINK WiFi module and SpaLINK smart device app allow you to connect to, and take control of your spa, locally or remotely via a WiFi, 3G or 4G network, providing access to your spa from any location at any time.

The SmartLINK module connects to any model SV series spa controller and then uses your home WiFi network to facilitate communication between the app server and the spa.

Global remote technical support via wifi

If you activate the support pin within the SpaLINK app, SpaNET can securely access and adjust software settings and see historical and real-time diagnostic data. This allows us to provide remote technical support across the globe without the need for a technician to visit the spa.

CONTROL YOUR SPA REMOTELY FROM ANYWHERE IN THE WORLD

The SpaLINK app for your smart device (Apple®/Android™) becomes a wireless remote for your spa enabling complete control over all spa accessories including pumps, air blowers, and LED spa lights. In addition the app provides total control over every possible spa configuration setting. There are no shortened menus or minimal access to limited settings. The SpaLINK app allows complete adjustment of all spa control settings as if you were standing in front of the spa.

Simple to use touch screen menus make adjusting the temperature, selecting your desired heating mode, programming filtration, sleep or power save timers and other such settings a breeze. Even if you have never owned or used a spa pool before, from the moment you open the app you'll be driving the spa like you were a professional.
